---

The data provided represents the number of PrEP users and their distribution by sex, race/ethnicity, and age. The percentages are calculated based on the total population for the respective categories. The rates are calculated per 100,000 population, offering a clearer understanding of the prevalence of PrEP use.
The 2022 PrEP-to-Need Ratio (PNR) is the ratio of the number of PrEP users in 2022 to the number of people newly diagnosed with HIV in 2021. PNR serves as a measurement for whether PrEP use appropriately reflects the need for HIV prevention. A lower PNR indicates more unmet need.

PNR, 2022

8.05

PNR, by Sex, 2022

Male: 9.75
Female: 2.12

PNR, by Race/Ethnicity, 2022

Female Transmission Categories
Injection Drug Use (26.6%)
Heterosexual Contact (70.2%)
Other/Unknown* (3.2%)

*Includes risk factor not reported or identified, along with hemophilia, blood transfusion, perinatal exposure, or missing/suppressed data.
Percent of People Newly Diagnosed with HIV, by Transmission Category, 2021

**Male Transmission Categories**

- Injection Drug Use (5.7%)
- Heterosexual Contact (18.8%)
- Male-to-Male Sexual Contact (72.6%)
- Male-to-Male Sexual Contact & Injection Drug Use (2.6%)
- Other/Unknown* (0.3%)

**Female Transmission Categories**
*Includes risk factor not reported or identified, along with hemophilia, blood transfusion, perinatal exposure, or missing/suppressed data.

**HIV Mortality Rates, 2019-2021**

Mortality Rates of Persons Diagnosed with HIV per 100,000 population, 2019-2021
These data represent 2021 weighted estimates of HIV testing prevalence by selected demographic characteristics, based on responses to the Behavioral Risk Factor Surveillance System (BRFSS) survey question, “Have you ever been tested for HIV?”
Unstable Housing or Homelessness

Persons were considered to have experienced unstable housing or homelessness if they reported any form of unstable housing or homelessness during the past 12 months.

Percentage with Unstable Housing or Homelessness

![Graph showing percentage with unstable housing or homelessness]

HIV Stigma

Median score of HIV Stigma on a 10-item scale ranging from 0 (no stigma) to 100 (high stigma). Score is based on 4 dimensions of HIV stigma: personalized stigma during the past 12 months, current disclosure concerns, current negative self-image, and current perceived public attitudes about people living with HIV.

----- Median Score 0 = No Stigma 100 = High Stigma

To make data easier to view, we have zoomed in to 0-40 on the stigma scale(s) below.
